### **INTRODUCTION:**

This report presents test results of Flame Spread and Smoke Developed Value per ASTM E-84-19b. The report also includes Material Identification, Method of Preparation, Mounting and Conditioning of the specimens.

The tests were performed in accordance with the specifications set forth in ASTM E-84-19b, Standard Test Method for Surface Burning Characteristics of Building Materials, both as to equipment and test procedures. This test procedure is similar to UL-723, ANSI NO. 2.5, NFPA No. 255 and UBC 42-1. The test is applicable to exposed interior surfaces such as walls and ceilings.

The test results cover two parameters: Flame Spread and Smoke Developed Values during the 10-minute fire exposure. Inorganic cement board and red oak flooring are used as comparative standards and their responses are assigned arbitrary values of 0 and 100 respectively.

### **PREPARATION AND CONDITIONING:**

The test sample identified as ROYSONS CORPORATION – NOLAR NON-VINYL WALLCOVERING - (ADHERED) was prepared by adhering the material to 5/8” Standard IC board, glued using FR - Shur-Stik wallcovering adhesive. This method of sample preparation is described in ASTM E2404-15A, standard practice.

### **TEST PROCEDURE: Adhered**

The tunnel was thoroughly pre-heated by burning natural gas. When the brick temperature, sensed by a floor thermocouple, had reached the prescribed 105 Fahrenheit +/- 5 Fahrenheit level, the sample was inserted in the tunnel and a test conducted in accordance with the standard ASTM E-84-19b procedures.

The operation of the tunnel was checked by performing a 10-minute test with inorganic board of the day of the test.

This test sample **\*meets** the A.S.T.M. E-84-19 Standard.

This test sample **\*meets** the N.F.P.A. LIFE SAFETY CODE 101.
